Edison Healthcare Insight

May 2018

Published by Edison Investment Research

Maxim Jacobs

Max joined Edison's healthcare team in December 2014. Prior to this he worked as a senior analyst at Guidepoint Global. Max has also previously worked as a senior analyst at Ridgemark Capital, a sector head at Broadfin Capital and as a senior analyst at Mehta Partners. He is a CFA charter holder.

Dr Nathaniel Calloway

Nathaniel Calloway joined the healthcare team in December 2015. Before Edison, he performed healthcare investment research for a fund at Bishop Rosen and for Wainscott Capital Partners. Prior to his role as an analyst he performed molecular neuroscience research at Cornell Medical School and holds a PhD in chemistry from Cornell. He has published eight scientific papers on topics ranging from physical chemistry to immunology, and he has been recognised as an American Heart Association fellow and an American Chemical Society Medicinal Chemistry fellow.

Pooya Hemami

Pooya is a licensed optometrist with over five years of experience in life sciences equity research. Prior to joining Edison, he covered the Canadian healthcare sector as a research analyst at Desjardins Capital Markets. He holds a doctor of optometry degree from the University of Montreal, and an MBA (finance concentration) from McGill University. He received his CFA charter in 2011.

Dr John Savin

John is an analyst working on biotech, pharma, medical device and diagnostics companies. As founder CEO of Physiomics, he devised the strategy, raised funds and took the company to AIM in 2004. At Greig Middleton, John was director in charge of the pharma and biotech analyst team and worked with corporate finance on fund-raising, IPOs and corporate restructuring. He has an industry background in sales and marketing with GE Healthcare and AstraZeneca and is a co-author on a number of scientific publications.

Juan Pedro Serrate

Juan joined Edison's Healthcare team in April 2016. A veterinarian by training, he has held business positions in the healthcare sector over the past 12 years. Juan has collaborated with independent equity research firms, specialising in fundamental analysis and valuations. For more than six years, he co-managed a seed capital fund in Spain that invested in biotech start-ups and projects. Earlier in his career, he was a research fellow at the Yale University School of Medicine. He has a Master's degree in biotechnology, as well as an MBA from IESE Business School.

Dr Dennis Hulme

Dennis joined Edison in December 2014. Prior to this he worked as an analyst at BBY Stockbrokers and as a research scientist at CSIRO. Dennis was ranked number two healthcare stock picker in the 2010 StarMine Analyst Awards and has a PhD in veterinary sciences.

Dr Jonas Peciulis

Jonas joined Edison in November 2015. He is a qualified medical doctor with several years of clinical practice. He then moved into equity research as a healthcare analyst at Nornie Securities, focused on Norwegian companies, and received two StarMine awards for stock picking in 2013. Most recently, he worked for a London-based life sciences venture capital company before completing his MBA degree.

Dr Susie Jana

Susie joined the team in September 2015 and has 16 years' experience in the healthcare sector. She is a qualified medical doctor, having studied medicine at UCL. She also holds an intercalated BSc in psychology. After a few years working as a junior doctor in the NHS, Susie joined the investment banking industry for six years on the sell-side covering biotechnology stocks, then mid- to large-cap pharmaceuticals at Société Générale. Most recently she worked as a buy-side analyst, covering European biotech, pharma and medtech stocks at F&C Investments for five years.

Dr Andy Smith

Andy joined the Healthcare team at Edison in November 2017 after a period as a senior principal in ICON's Pricing & Market Access consultancy. Prior to ICON he was chief investment officer at Mann Bioinvest and managed healthcare and biotech funds at AXA Framlington, SV Life Sciences, Schroders and 3i Group. Andy is a scientist by training and completed his PhD with Glaxochem after working for ICI and in the NHS. Between working as a lecturer at Guy's Medical School, he worked in R&D management at SmithKline Beecham, before moving to the Strategic Product Development group in SB Pharmaceuticals to be a global product manager. Andy also has an MBA from the University of Greenwich and teaches the finance module on the Master's in Bioscience Enterprise course at the University of Cambridge.

Dr Daniel Wilkinson

Daniel joined Edison's Healthcare team in January 2016. He spent four years at Imperial College London, where he undertook both a Master's in Chemical Biology of Health & Disease and a PhD in Biosensors and Biotechnology in Diabetes. Before this he worked at eTect, a spin-out company from the University of Leeds that was focused on biosensor technology. He is currently studying for the Investment Management Certificate (IMC).

Alice Nettleton

Alice joined Edison's Healthcare team in November 2017. Previously, she worked as a business analyst at PharmaVentures on a variety of consulting projects relating to life science transactions. Alice holds a BSc in Biomedical Sciences from King's College London and an MSc in Business Creation and Innovation in Biomedicine from Gothenburg University, and while studying has completed two internships at IP Pragmatics.

Briana Warschun

Briana received her Master of Science in Biomedical Engineering from Brown University in May 2017. Before that, she received a BS in Biomedical Engineering with a minor in Biophysics from George Washington University. While pursuing her education, Briana gained work experience through internships at the medtech behemoth C.R. Bard as well as at the healthcare consulting firm The Advisory Board Company.

Company description

4SC is a Munich-based cancer biopharmaceutical company. Resminostat (HDAC inhibitor) is the lead candidate for cutaneous T-Cell lymphoma (pivotal study started in Q416). It has a second compound, 4SC-202 (Phase II) and a preclinical asset, 4SC-208. 4SC also has several partners including Yakult Honsha for resminostat in Japan.

Analyst

Dr Jonas Peciulis

4SC (VSC)

INVESTMENT SUMMARY

4SC's partner, Yakult Honsha, has joined the pivotal RESMAIN study, which explores the lead asset, resminostat. By enrolling additional patients, Yakult will be able to submit resminostat for approval in Japan. This indicates an external validation of 4SC's R&D strategy. Resminostat (a broad-spectrum HDAC inhibitor) is uniquely positioned as a maintenance therapy to make remissions more durable for patients with advanced CTCL, who have achieved remission with systemic therapy. Timelines remain unchanged for the study to report data in H119. 4SC has a broad development plan for its second lead product 4SC-202 (HDAC Class I specific inhibitor) positioned to be used in combination with checkpoint inhibitors with the rationale to tackle the high non-responder issue. 4SC-208 (downstream Hedgehog signalling pathway inhibitor) is the third asset expected to enter clinical development in 2019.

INDUSTRY OUTLOOK

Resminostat could become the first HDAC inhibitor to gain EU approval for CTCL (vs two HDACs approved in the US), but more importantly the maintenance treatment indication would be unique, potentially offering a competitive edge in Europe and the US.

Andy Smith

Abzena (ABZA)

INVESTMENT SUMMARY

Abzena offers a full-service biologics research and manufacturing capability, enabling safer and more effective biological products, including immunogenicity assessment, protein/antibody engineering, bioconjugation chemistry and biomanufacturing. The 2017 fundraising of £25m (gross) is enabling it to expand its service offering and capacity. The company now aspires to profitability without further equity raises. Fee-for-services provides revenues, while successful commercialization of products created using Abzena's technologies offers the prospect of future royalty revenue; 12 such products are now in the clinic. Abzena has recently announced a positive pre-close statement and results are expected in mid-May.

INDUSTRY OUTLOOK

The biological services industry is highly competitive but Abzena's deepening portfolio of technologies and services is compelling, while its ADC technology offers safety and efficacy advantages over competitors.

Analyst

Dr John Savin

Acarix (ACARIX)

INVESTMENT SUMMARY

Acarix's annual report confirms reported 2017 revenues of SEK 638k. Gross profit was SEK 430k, with a gross margin rise to 75% in Q4. We do not expect any major sales upturn in 2018, as the key factor is German government reimbursement – this is not expected before 2019. There is additional sales potential in other European territories. We do not expect a US launch before 2022, but we have assumed a US trial starts in 2019. Mr Lindholm is the interim CEO.

INDUSTRY OUTLOOK

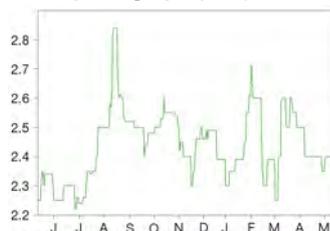

CADScore helps doctors to identify cardiac patients who probably require no further risky invasive clinical testing. The Dan-NICAD II study will enrol 2,000 patients with suspected stable coronary artery disease to add data, evaluate the test in patients aged 30–39 and aid acceptance of CADScor among key opinion leaders. The planned 'Seismo' study with 200 patients aims to explore the use of CADScor for the early diagnosis of heart failure.

AFT Pharmaceuticals (AFT)

INVESTMENT SUMMARY

AFT Pharmaceuticals is a New Zealand-based speciality pharmaceutical company that currently sells 130 prescription speciality generics and OTC products through its own sales force in New Zealand, Australia and South-East Asia and has been expanding its geographic footprint. Maxigesic, its combination acetaminophen/ibuprofen product that is addressing a \$10.4b market, is currently sold and launched in 10 countries and distribution agreements are in place in a total of 125. Additionally, AFT recently reported positive results from a pivotal trial for Maxigesic IV. AFT is also developing a handheld device called SURF Nebuliser, which is able to deliver therapies intranasally, with a main focus on the \$3 billion conscious sedation market.

INDUSTRY OUTLOOK

AFT is a multi product company targeting pharmacy prescription, OTC and hospital markets. Data for Maxigesic offers them a competitive advantage in a fragmented industry.

Juan Pedro Serrate

Allium Medical (ALMD)

INVESTMENT SUMMARY

Allium Medical Solutions is a company focused on developing and marketing minimally invasive devices in the cardiovascular, metabolic, genitourinary and gastrointestinal areas. The company has three selling product lines: Allium Stents, IBI (EndoFast) and Gardia Medical. Peripheral stents and EndoFast urogynecology devices generate the bulk of revenues (92% of NIS7.7m in 2017). Allium has achieved revenue CAGR of 20% in 2011-17. The investment case rests on Allium's ability to execute on its ambitious growth strategy, with revenues expanding at a double-digit rate as the company continues to gain market share in established and new regions. We estimate that cash, equivalents and short-term deposits of c NIS23m provide runway until 2019.

INDUSTRY OUTLOOK

We expect Allium's growth to accelerate in the medium term, resulting in 2018-20e revenue CAGR of 43%. Allium has two devices in development: Allevetix, in a clinical trial for diabetes and obesity; and TruLeaf, a mitral valve replacement device in preclinical studies. Gardia's Wirion device has been approved by the FDA, becoming the only embolic protection system for all atherectomy procedures. Stents have been approved in China. Stents and EndoFast have been approved in Russia.

Relative*	(14.8)	(15.9)	(14.5)

* % Relative to local index

Analyst

Dr Jonas Pecuilis

Angle (AGL)

INVESTMENT SUMMARY

Angle's Parsortix cell separation platform is used to detect and harvest circulating tumour cells from blood. CTCs provide the complete picture since viable, intact CTCs can be used for DNA, RNA and protein analysis as well as culturing and xenograft models. Angle acquired Zplex platform of Axela, a multiplex solution providing enhanced analysis of protein, DNA and RNA. This will allow Angle to offer a "sample to answer" product to its clients. A key catalyst in the near term is the completion of the FDA clinical studies in breast cancer expected in H218 and a potential subsequent submission to the FDA. The company reported results from its two studies (n=200 each) for triaging women with ovarian masses before surgery. Reported ROC-AUC was high at 95.1% (assay combines the expression levels of 9 different genes and 4 serum markers). Angle has existing collaboration agreements with three multinationals (Qiagen, Philips and Abbott) indicating growing interest in CTCs from large players. We are updating our estimates.

INDUSTRY OUTLOOK

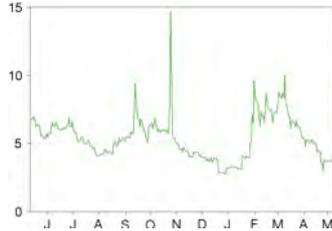

The precision medicine approach is an initiative aiming to improve treatment efficacy by tailoring the treatment to the patient and their disease with liquid biopsy being one of the key enabling tools.

Pooya Hemami

Atossa Genetics (ATOS)

INVESTMENT SUMMARY

Atossa is advancing endoxifen, a metabolite of tamoxifen, as a topical treatment for high mammographic breast density (MBD), a condition associated with higher cancer risk. Atossa is also developing oral endoxifen as well as a potential treatment for breast cancer patients refractory to tamoxifen. About 20-25% of the 1.0m women taking tamoxifen worldwide develop resistance to it, and have an increased risk for cancer recurrence. The firm reported positive Phase I data for both formulations, including results showing that patients obtain "steady state" serum endoxifen levels after about 7 days of daily oral dosing.

INDUSTRY OUTLOOK

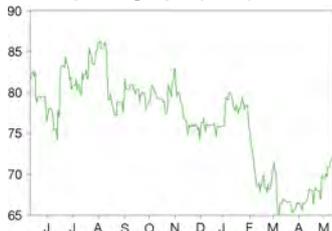

Atossa is also advancing its proprietary intraductal microcatheter (IDMC), intended to selectively introduce drugs to breast ducts to improve drug targeting. It is combining its IDMC with established cancer drug fulvestrant and started a Phase II trial in 2016. The firm plans to start Phase II trials for oral and topical endoxifen in Q218. Atossa had \$7.3m net cash on 31 December 2017, and is planning to raise up to \$20m through a rights offering to be completed in May 2018.

Analyst

Dr Susie Jana

Basilea Pharmaceutica (BSLN)

INVESTMENT SUMMARY

Basilea has two approved hospital-based products: Cresemba (severe mold infections) and Zevtera (bacterial infections). Zevtera has started US phase III development (ABSSSI trial underway, SAB trial to start mid-2018). Multiple licensing/distribution agreements announced in 2017 for marketed assets Cresemba and Zevtera should drive top-line growth faster than we had expected. Major deals with Pfizer include Cresemba in Europe (ex Nordics), Russia, Turkey, Israel, China and Asia Pacific. Basilea's oncology pipeline focuses on drugs that target resistance to current cancer therapies. BAL101553 (phase IIA in glioblastoma and ovarian cancer due to start) and BAL3833 (phase I in solid tumours). Recently Basilea in-licensed ARQ 087 (derazantinib) from ArQule, a FGFR multi-kinase inhibitor in Phase II registration study for intrahepatic cholangiocarcinoma and phase I/II development for solid tumours.

INDUSTRY OUTLOOK

There is an increasing need for novel antimicrobial agents with efficacy against resistant strains of bacteria (eg MRSA), and/or improved side effect profiles. Hence the opportunities for Zevtera and Cresemba could be significant.

Bio-Light Life Sciences (BOLT)

INVESTMENT SUMMARY

BioLight Life Sciences developing Eye-D VS-101, an extended-dose latanoprost drug implant designed to treat glaucoma that recently reported positive data in a Phase I/IIa trial, and TeaRx, a dry eye syndrome diagnostic test. VS-101 can be helpful for the 20-60% of glaucoma patients who do not comply with daily eye drop therapy.

INDUSTRY OUTLOOK

BioLight's IOPTima subsidiary (of which it holds a 70% stake) signed a definitive agreement in November 2017 to be acquired by Chengdu Kanghong Pharma. The transaction consists of four stages, with the initial stage (completed in March 2018) consisting of a \$7m investment in IOPTima for a 19% stake. The subsequent stages involve the acquisition of the remaining IOPTima shares from all its other shareholders (including BioLight), and are subject to the fulfillment of several conditions, including meeting IOPTima operational objectives and the renewal of Chinese registration by April 2018 for its IOPTimate laser surgical device (for the treatment of glaucoma). If all conditions are met and if the transaction is fully executed (by mid-2021), the gross consideration to BioLight is expected to range between about \$23m and \$27.5m.

Bionomics (BNO)

INVESTMENT SUMMARY

Bionomics is a clinical-stage pharmaceutical company with two small molecule discovery platforms: ionX for ion channel targets and MultiCore chemistry for rapid candidate identification. The company is testing BNC210 in Phase IIb for post-traumatic stress disorder (PTSD) and had a programme licensed to Merck in Phase I for royalties, and US\$506m in upfront and milestone payments.

INDUSTRY OUTLOOK

There are currently limited options for sufferers of PTSD, which does not respond to treatment as well as other anxiety centered disorders. BNC210 hopes to surmount this with its novel anxiolytic mechanism.

Carmat (ALCAR)

INVESTMENT SUMMARY

Carmat is currently enrolling its 20-patient study for its artificial heart in France, Kazakhstan, the Czech Republic and Denmark. To date, about six patients have been implanted, with a 100% survival rate at one-month. It also opened its new and more automated production facility, in Bois-d'Arcy. Carmat raised €52.9m in December 2017, and with the majority of proceeds to be used towards the ongoing EU pivotal trial. Given the firm's 31 December 2017 cash position of €60.7m, we estimate Carmat can finance operations into Q219.

INDUSTRY OUTLOOK

The Carmat artificial heart is being developed as a permanent replacement or destination therapy (DT) for chronic biventricular heart failure or acute myocardial infarction patients, who do not have access to a human donor heart. Despite the high EU and US prevalence of Stage IV heart failure (c 500,000 patients), the shortfall in donor hearts is such that only about 3,800 human heart transplants were performed in Europe and the US in 2013.

Dr Nathaniel Calloway

Cellular Biomedicine Group (CBMG)

INVESTMENT SUMMARY

Cellular Biomedicine Group (CBMG) is a trans-Pacific cell therapy company developing products in China and the US. It has two ongoing Phase I clinical trials of CD19 chimeric antigen receptor T-cell (CAR-T) therapies for blood cancers (adult ALL and DLBCL) in China and recently received INDs from the CFDA for both indications. Data is expected around end-H118. Additionally, it is adapting its knee osteoarthritis (KOA) treatment ReJoin as an allogeneic product, AlloJoin, which recently completed Phase I testing.

INDUSTRY OUTLOOK

The company is focusing on CAR-T. The first CAR-T therapies were just recently approved in 2017 for the treatment of ALL and DLBCL, with developing ongoing in other hematologic malignancies such as multiple myeloma. Progress in the space has triggered significant M&A interest: Gilead bought Kite Pharma for \$12bn in August 2017, and Celgene has an outstanding tender offer for Juno Therapeutics at \$9bn.

Dr John Savin

Celyad (CYAD)

INVESTMENT SUMMARY

Celyad has seen a near complete response with "clinical validity" in an AML patient treated with CYAD-01 NKR CAR T-cell therapy in the THINK trial. As two stable disease cases in colorectal cancer have also been seen plus ovarian responses, Celyad has identified AML and colorectal cancer as lead development indications. Cash on 30 December was €34m due to last into H119. A global offering is underway.

INDUSTRY OUTLOOK

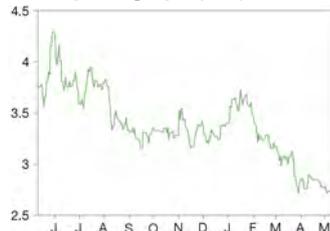

The CART therapeutic area remains a hot area for investment with increasing interest in the next stage of allogeneic products, an area where Celyad holds a key patent with a Novartis deal. There are no dramatic competitor moves into solid tumours apparent with the major players fighting for the CD19 area in acute leukaemia. This leaves Celyad in a key position in both AML and CRC with initial moves into combination solid tumour therapies. The LINK and SHRINK studies reported the first patients dosed in May. Celyad is also developing a comprehensive trial programme in NKR CAR T-cells.

Clal Biotechnology (CBI)

INVESTMENT SUMMARY

Clal Biotechnology (CBI) is an Israel/Boston-based healthcare investment company with an extensive portfolio incorporating a diverse range of technologies, indications and stages of development. CBI holds direct investments in 10 companies (nine biotech and one medical device company), most importantly MediWound, a NASDAQ-listed wound care company and Gamida Cell, which is developing a universal bone marrow transplant (BMT) product. Also, BioCancell and Biokine have programs in Phase III or Phase III ready. 2018 is expected to be a very eventful year for CBI, with key data expected from several portfolio companies, including MediWound. In addition, NASDAQ listings are currently targeted for four investments, namely Gamida Cell, BioCanCell, Cadent and Neon.

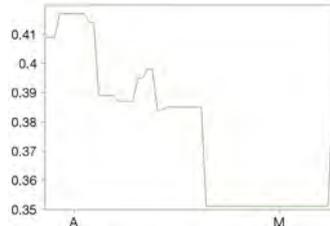

INDUSTRY OUTLOOK

CBI is invested in a variety of life science companies, including a wide and diverse range of technologies, indications and stages of development, all of which have high potential.

CollPlant Holdings (CLGN)

INVESTMENT SUMMARY

CollPlant is an Israel-based regenerative medicine company. It is focused on developing and commercialising tissue repair products with its plant-based technology, rhCollagen. It has two products on the market, VergenixSTR and VergenixFG, and has received several orders for its 3D bioprinting product bioInk. It received its first order in September from a major biotechnology company, which subsequently reordered more product valued in the hundreds of thousands of dollars. The company intends to use the product to print organs for transplant. Additionally, CollPlant has received an order from a major medical device company in the order of multiple tens of thousands of dollars to develop a 3D printed orthopaedic implant.

INDUSTRY OUTLOOK

Orthobiologics and advanced wound care are substantial growing markets and are estimated to be worth \$6.7bn (according to GlobalData) and \$8.5bn (according to Smith & Nephew) respectively.

e-Therapeutics (ETX)

INVESTMENT SUMMARY

e-Therapeutics (ETX) offers investors an exposure to a proprietary, cutting-edge in silico drug discovery platform that has already attracted significant investment and has been fully operational since 2014. This second-generation platform has generated two new chemical entities (NCEs) in immunoncology that are the subject of business development efforts and the cusp of commercial validation. The priority for the company is securing partnership deals to provide external validation of this approach. ETX's strength is its discovery capability, particularly in complex disease networks.

INDUSTRY OUTLOOK

Network-driven approaches could revolutionise drug discovery and shorten the path to market by minimising technical risks and drug development costs. ETX is differentiated from its competitors through its expertise in curating, processing and analysing data in the context of mechanistic modelling of disease.

Genkyotex (GKTX)

INVESTMENT SUMMARY

Genkyotex is a biotech company focused on NOX science and the development of small molecule NOX inhibitors for fibrosis and inflammation. Lead product GKT831 is in a Phase II clinical trial in primary biliary cholangitis (PBC) with data in 2018. An Independent Safety Monitoring Board has recommended the continuation of the trial without protocol amendment. The company expects to submit a Clinical Trial Application for its second product GKT771 in 2018. GKT771 targets inflammation and angiogenesis among other processes. A Phase II investigator-sponsored trial in patients with Type 1 diabetes (T1D) and kidney disease has recently started recruiting patients in Australia. The company also has a portfolio of early stage NOX inhibitors for oncology, hearing loss and neurology indications. Genkyotex has partnership with the Serum Institute of India Ltd (SIIL) which involves up to \$57m of milestone payments and single-digit royalties on net sales. Cash and equivalents were €12.5m at 31 March 2018 which provides runway into Q319.

INDUSTRY OUTLOOK

Genkyotex is focused on NOX science, an enzyme complex that generates reactive oxygen species (ROS). Increased NOX activity has been linked to various diseases; in particular to metabolic and cardiovascular diseases and neurodegeneration.

Dr Susie Jana

Hutchison China MediTech (HCM)

INVESTMENT SUMMARY

HCM has built a substantial pipeline of potential first-in-class or best-in-class tyrosine kinase inhibitor (TKI) drugs, some of which are in development with strategic partners. HCM have submitted a new drug application (partnered with Eli Lilly) for fruquintinib in CRC to the China FDA (full Phase III CRC data [China] was presented at ASCO 2017), marking a major milestone in the company's life. Separately in collaboration with AstraZeneca, HCM have initiated SAVOIR, a global Phase III trial of savolitinib in PRCC. Our forecasts and valuation have been placed under review.

INDUSTRY OUTLOOK

HCM's profitable Chinese healthcare business continues to benefit from the fast-growing domestic market, while the clinical, regulatory and technological environments are highly conducive to novel drug development. In the longer term, if the oncology and immunology pipeline comes to fruition, HCM has the potential to become a global oncology and immunology player.

Juan Pedro Serrate

Hybrigenics (ALHYG)

INVESTMENT SUMMARY

Hybrigenics has adopted a development strategy with vitamin D3 derivative inecalcitol, focusing on adult haematological cancers. In addition to chronic lymphocytic leukaemia (CLL) and chronic myeloid leukaemia (CML), Hybrigenics is prioritising acute myeloid leukaemia (AML) given inecalcitol's orphan status in the US and Europe and the scarcity of treatment options in this aggressive and difficult to treat leukaemia. Inecalcitol has the potential to enhance rather than replace approved therapies, particularly with its benign safety profile. The company has refocused exclusively on R&D after the MBO of its subsidiary dedicated to proteomic services. Cash position at end December 2017 was €7m.

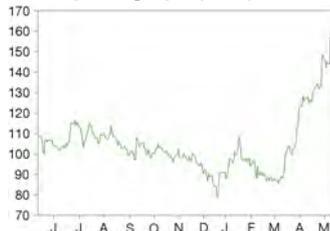

INDUSTRY OUTLOOK

An international Phase II study in AML started in France and the US in H216 with data expected in 2019. Final data from a Phase II in CML has been presented: 20% of patients who had completed one year in the study achieved a deep molecular response (DMR) which may allow patients to discontinue treatment (functional cure). Finally, the collaboration with Servier on inhibitors of ubiquitin-specific proteases for oncology is ongoing; up to €12m in potential payments is associated with this programme until registration.

Immunovia (IMMUNOV)

INVESTMENT SUMMARY

Immunovia is developing IMMray PanCan-d, a blood-based test for the early detection of pancreatic cancer. Immunovia is running the PANFAM-1 prospective trial in high-risk patients and expects to generate initial self-pay sales in Q418. Immunovia is conducting a retrospective study with Lund University Diabetes Centre, to compare diabetes patients who developed pancreatic cancer with those who did not. Immunovia is also running the prospective PANDIA-1 study in patients >50 years old with new onset diabetes. Immunovia and the University College London have started collecting samples from patients with early symptoms which is the initial part of the prospective PANSYM-1 study. Additionally, IMMray has potential in immune diseases. The company's shares have been approved for listing on Nasdaq Stockholm. Cash and equivalents at end-March 2018 were SEK167.8m.

INDUSTRY OUTLOOK

Immunovia is targeting a potential opportunity of over SEK41bn. It will first target patients with a family history of pancreatic cancer, or other pancreatic diseases with increased risk of cancer (estimated at 200,000 in the EU/US) followed by patients over 50 years of age diagnosed with type 2 diabetes, (estimated at 3.4 million new patients per year) and patients with early gastric symptoms (estimated 1m tests).

Immuteq (IMM)

INVESTMENT SUMMARY

Immuteq has three promising clinical product candidates in six ongoing clinical trials and one pre-clinical asset, all based on a versatile immunotherapy target Lymphocyte activation gene-3, LAG-3 (one partnered with GSK and a second partnered with Novartis). The lead in-house LAG-3 product, eftilagimod alpha (IMP321), is being developed initially in metastatic breast cancer in combination with chemotherapy (226-patient randomised Phase IIb study to fully recruit in Q318, 47% response rate in the 15-patient dose-escalation phase) and in melanoma in combination with the anti-PD1 checkpoint inhibitor Keytruda (33% preliminary response rate in first two of three dose-finding cohorts; currently recruiting an additional six-patient expansion cohort at the highest dose). Novartis and GSK are progressing clinical trials of partnered LAG-3 programmes, providing additional validation for the technology and the target. Immuteq will collaborate with Merck (MSD) in a study of IMP321 plus Keytruda in lung, ovarian and head and neck cancers in H218.

INDUSTRY OUTLOOK

Immunotherapies are among the most promising class of products for cancer and autoimmune diseases. The LAG-3 products are potentially first-in-class, each with distinct mechanisms and applications.

Maxim Jacobs

Intec Pharma (NTEC)

INVESTMENT SUMMARY

Intec Pharma is a drug delivery company that has developed a novel drug delivery device termed the accordion pill (AP), a folded, multilayer membrane packaged into a normal capsule, which expands to a sheet within the stomach to many times its original size. This property causes the pill to be retained in the stomach for up to 12 hours. This is ideal for drugs with local activity in the stomach or upper digestive tract or with poor solubility. AP-CDLD, a controlled release formulation of carbidopa and levodopa for Parkinson's is in Phase III with enrollment expected to complete by H218 with data in mid-2019. They have also completed a Phase I trial of AP-CBD/THC, their cannabinoid program and will be making some design changes to improve the PK.

INDUSTRY OUTLOOK

Parkinson's disease is a neurodegenerative disease in which the dopamine secreting neurons in the brain are lost, leading to severe motor defects and cognitive impairment. Approximately one million people in the US have Parkinson's.

Maxim Jacobs

International Stem Cell (ISCO)

INVESTMENT SUMMARY

International Stem Cell (ISCO) is an early-stage cell therapy company currently in Phase I/IIa clinical trials to treat Parkinson's disease (PD), and recently completed dosing the second cohort of patients (8 so far). The company recently reported positive interim clinical data from the first cohort of patients in the trial. The company is also preparing to initiate a Phase II trial in traumatic brain injury in the coming months. With its hpSC technology, ISCO has created 15 stem cell lines, each of which is a different HLA type. From this, it creates different cell types such as liver cells, neural cells and three-dimensional eye structures.

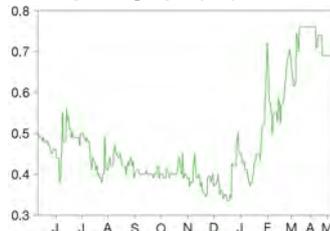

INDUSTRY OUTLOOK

ISCO's technology platform is based on human parthenogenetic stem cells (hpSCs). Parthenogenetic stem cells are created from unfertilized human eggs (oocytes) chemically activated to make the cells pluripotent. As hpSCs express fewer parental histocompatibility antigens, they reduce the risk of immune rejection.

Dr Dennis Hulme

Kazia Therapeutics (KZA)

INVESTMENT SUMMARY

Kazia Therapeutics is developing two groups of anti-cancer compounds, including GDC-0084, a PI3K inhibitor licensed from Genentech that has been granted orphan designation in the US for glioblastoma. It commenced recruitment in a US-based Phase II study of GDC-0084 in March; an initial dose-optimisation lead-in component will precede a randomised trial in 228 first-line glioblastoma patients (final data due 2021). It is also undertaking a Phase I trial of its third generation benzopyran drug Cantrixil. The 60-patient Phase I trial in ovarian cancer is expected to report MTD in Q218; while the primary aim is to assess safety and tolerability, radiological responses and biomarkers will be assessed for indications of efficacy. Kazia has de-emphasised its next-generation anti-tropomyosin drug discovery program which is supported by an A\$3m government grant. It has outlicensed its preclinical benzopyran program to Heaton-Brown Life Sciences, and is collaborating with Noxopharm to support the development of NOX66.

INDUSTRY OUTLOOK

Kazia Therapeutics is a biotechnology company listed on the ASX and NASDAQ. Its two main drug technology platforms are third generation benzopyrans and a PI3K inhibitor.

Dr John Savin

Kiadis Pharma (KDS)

INVESTMENT SUMMARY

Kiadis is developing ATIR: an allogeneic donor T-cell preparation that uses its Theralux technology to deplete alloreactive T-cells that can cause Graft vs Host disease (GvHD). The ATIR T-cell preparation is given 28-32 days after a T-cell depleted haplo-identical bone marrow transplant used to treat acute leukaemia. ATIR is in a European Phase III randomised, open-label study against the currently favoured "Baltimore" protocol to test if it improves GvHD free, cancer relapse free survival after two years. A conditional Marketing Application has been filed with the EMA. An EMA opinion is possible in Q4 2018. Cash at 31 March 2018 was €47.7m after a fund raising of €23.4m gross in March 2018. It has repayable debt of €15m. Forecasts are under review.

INDUSTRY OUTLOOK

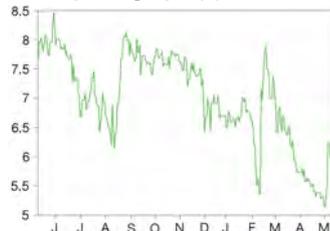

Zalmoxis, a similar product using a suicide gene switch safety feature, already has a CMA in Europe. There were 2,000 haplo-identical transplants in Europe in 2016. Bellicum's BPX-501 paediatric product should report data by early 2019.

Dr Daniel Wilkinson

MagForce (MF6)

INVESTMENT SUMMARY

MagForce is moving forward with its strategy to drive uptake and acceptance (in the US and Europe) of its NanoTherm nanoparticle-based therapy for cancer. In Germany, Magforce has six centres commercially capable (three utilised, c50 patients to date) of treating glioblastoma (GBM) patients. To accelerate uptake of NanoTherm treatment in Europe, MagForce will expand from Germany into other countries, firstly Poland and Italy (funded primarily by an up to €35m loan from the European Investment Bank). In the US, its subsidiary Magforce USA has received FDA IDE approval and a pivotal clinical trial is expected to begin enrollment shortly. Our forecasts are currently under review.

INDUSTRY OUTLOOK

MagForce's NanoTherm therapy has been designed to directly affect tumours from within, while sparing surrounding healthy tissue. Magnetic nanoparticles are directly injected into a tumour and are then heated in the presence of an external magnetic field generated by specialist equipment (NanoActivator). This can destroy or sensitise the tumour for additional treatment.

Dr Daniel Wilkinson

Medigene (MDG1)

INVESTMENT SUMMARY

Medigene is focused on the rapid development of its cancer immunotherapy technology platforms: dendritic cell (DC) cancer vaccines, adoptive T-cell therapy (TCR) and T-cell specific antibodies (TAB). A Phase II study is ongoing with DC vaccines for acute myeloid leukaemia. For TCRs, Medigene has initiated its first company-led trial with MDG1011 in patients with PRAME expressing AML, MDS or MM. Important progress includes an alliance with bluebird bio to utilise its TCR technology platform to identify four therapeutic candidates. Medigene is well-funded to execute its clinical programme, as of 31st March cash was €49.1m.

INDUSTRY OUTLOOK

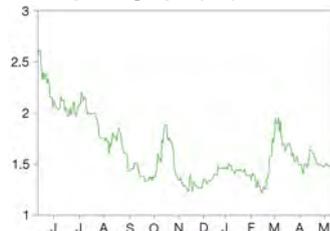

Cancer immunotherapy is attracting huge biotech investor interest. Medigene's DC vaccine technology is a new generation, with multiple potential efficacy and manufacturing benefits over the forerunners, eg Provenge. The TCR programme has similarities to CAR-T products, but with potentially significant efficacy and safety advantages.

Mesoblast (MSB)

INVESTMENT SUMMARY

The potentially pivotal 55 pediatric patient acute graft vs host disease (GvHD) study met its primary efficacy outcome, reporting a 69% overall response rate vs 45% for historical controls (p=0.0003). The 100 day data is due in Q2 with 180 day safety data in Q3. This will lead to a fast track application to the FDA. A Phase III in chronic low back pain (CLBP) completed enrollment in March 2018. The NIH funded Phase IIb in end-stage CHF patients with an LVAD should have full data by Q4 CY18. The Phase III trial in heart failure has enrolled over 465 of the 600 patient target. Cash on 31 Mar was US\$59.5m. The Q3 FY18 operating outflow was US\$19.6m. In March, Mesoblast entered a US\$75m non-dilutive credit facility with Hercules and has drawn-down \$35 already.

INDUSTRY OUTLOOK

Mesoblast is the leading mesenchymal stem cell company. It has a manufacturing alliance with Lonza. JCR Pharmaceuticals markets Mesoblast's GvHD therapy in Japan; H1 FY18 royalties were US\$1.6m.

Dr Susie Jana

Molgen (MGN)

INVESTMENT SUMMARY

Molgen is developing novel immunotherapies for use in the post-chemo maintenance setting in cancer and for the treatment of infectious diseases. Mologen's efforts are focused on its lead product candidate lefitolimod. IMPALA a 540-pt pivotal study in metastatic colorectal cancer (mCRC) maintenance has completed full enrollment. Full data has been presented at ESMO 2017 for the 102-patient Phase II trial (IMPULSE) in small-cell lung cancer (SCLC). Topline results in the Phase I TEACH study to treat HIV (the first non-cancer study for MGN1703) have been announced. A 60-patient Phase I combination study of lefitolimod with Yervoy in solid tumours is now being conducted by MD Anderson, enrollment has started. Gross cash of €6.5m as of 31st December 2017. Mologen have signed a variety of financial agreements and a partnership with Oncologie which should enable sufficient funding into the 2nd half of 2018. Our forecasts are currently under review.

INDUSTRY OUTLOOK

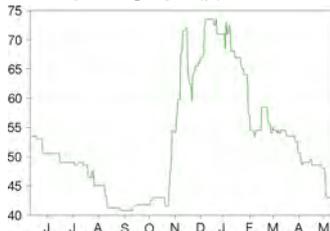

Results for IMPALA are expected in 2018/19. Final overall survival (OS) data from IMPACT (Phase II in mCRC) and IMPULSE may offer fresh financing/partnering opportunities for lefitolimod before then.

Maxim Jacobs

NetScientific (NSCI)

INVESTMENT SUMMARY

NetScientific has a focused portfolio of potentially disruptive biomedical and healthcare technology investments. Recent years saw significant strategic changes, including senior management restructuring, with a new highly experienced CEO on board, rationalisation of the portfolio and new funding. The current focus is on digital health, diagnostics and therapeutics with the portfolio consisting of four core investments in which it has controlling stakes (Vortex, Wanda, ProAxis and Glycotest) and one material investment (PDS). The aim is to bring these to commercialisation over the next two years, with the ultimate goal of an exit, realising value for investors. Vortex recently made its first commercial sale of the VTX-1 liquid biopsy system and ProAxis reported strong sales growth.

INDUSTRY OUTLOOK

NetScientific remains focused on sourcing, funding and building early- to mid-stage US and UK companies that are developing potentially breakthrough technologies in growing markets with unmet needs.

Analyst

Dr Jonas Peciulis

NeuroVive Pharmaceutical (NVP)

INVESTMENT SUMMARY

NeuroVive Pharmaceutical is a mitochondrial medicine specialist with a diversified asset portfolio. NeuroVive's core portfolio, which the company aims to develop internally, targets orphan indications: traumatic brain injury (TBI) with NeuroSTAT, various genetic mitochondrial diseases with KL1333 and NVP015, and mitochondrial myopathy with NVP025. Following the positive outcome in a Phase IIa study with NeuroSTAT, the drug candidate will proceed to a proof-of-concept study. The second most advanced product KL1333 was in-licensed from Yungjin Pharm in May 2017 and currently is in Phase I. Product portfolio for out-licensing includes NV556 and NVP022 for NASH and NVP024 for hepatocellular carcinoma. NeuroVive's recent rights issue has been oversubscribed raising c SEK78.5m gross.

INDUSTRY OUTLOOK

NeuroVive has a diversified portfolio with all assets aimed at improving mitochondrial metabolism and function. This puts NeuroVive among the very few experts in mitochondrial medicine in the industry, in our view. Central to NeuroVive's strategy is maintaining a network of KOLs, academic institutions and research organisations, which help to run innovative design and cost-effective studies.

Newron Pharmaceuticals (NWRN)

INVESTMENT SUMMARY

Newron's lead product, Xadago (safinamide) for Parkinson's disease (PD) has been launched in 14 European countries and is generating sales through commercial partner Zambon (ex-Japan/Asia). Additionally, Xadago has been launched in the US by sublicensee US WorldMeds. Following positive phase II/III data (Japan), partner Meiji plan to submit the safinamide MAA in Japan during 2018. Other pipeline assets include sarizotan for Rett syndrome, the pivotal trial STARS (placebo-controlled Phase II/III trial) to investigate breathing disorders associated with RS has initiated. Full data from the Phase II study of evenamide as an add-on to atypical antipsychotics, published in March 2017, demonstrated efficacy in terms of improvement on the symptoms of schizophrenia assessed by the Positive and Negative Syndrome Scale (PANSS). Newron raised CHF27m in 2017 in a private placement that it expects will help fund operations through 2019.

INDUSTRY OUTLOOK

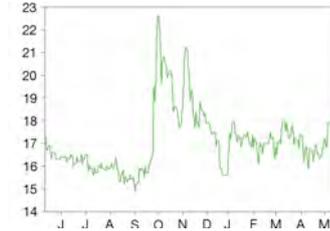

Parkinson's disease is a growing market. Xadago could have a unique position, with once-a-day dosing and a clean safety profile.

Dr Susie Jana

Nuevolution (NUE)

INVESTMENT SUMMARY

Nuevolution's proprietary Chemetics DNA-encoded screening platform technology enables fast and accurate small molecule drug discovery. The technology has received powerful external validation, including three recent collaborations (Amgen, Almirall and Janssen) that could generate significant value in the coming years. In addition, we expect Nuevolution to progress at least one internally generated asset into clinical development in the near future. Net cash of SEK 86.7m (31st March 2018) suggests a cash runway into 2018.

INDUSTRY OUTLOOK

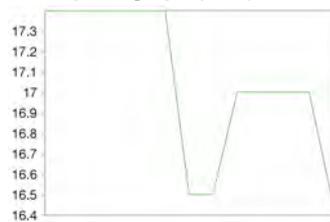

Significant promise is seen in DNA-encoded libraries due to the potential to rapidly develop small molecule drugs to 'tough-to-drug' targets. We continue to see major investment in the space from an array of companies, notably GSK, Roche and Novartis.

* % Relative to local index

Analyst

Dr Nathaniel Calloway

Oncology Venture (ov.ss)

INVESTMENT SUMMARY

Oncology Venture holds the worldwide drug development rights to the drug response predictor (DRP), a microarray technology that examines the expression of a panel of genes to identify potential responders to different cancer therapies. The company's goal is to then identify and in-license drugs that are active within populations that the DRP can identify. To date, the company has in-licensed six drugs and is in the early stages of validating the platform in the clinic.

INDUSTRY OUTLOOK

Oncology Venture and the DRP system have the potential to identify the value in drug assets that have otherwise been discontinued by identifying patient populations where these drugs are active. This allows the company to in-license these assets at low cost, which the company may then out-license after clinical validation.

Dr Jonas Peciulis

Onxeo (ONXEO)

INVESTMENT SUMMARY

Onxeo announced that the first patient had been treated with AsiDNA, a first-in-class DNA break repair inhibitor, via systemic administration in the Phase I trial. AsiDNA has already generated supportive data from a Phase I trial in melanoma using intratumoural injection. Alongside the Phase I trial Onxeo is conducting a broad preclinical programme that explores AsiDNA in various settings and combinations with other drugs. AsiDNA is part of the proprietary, novel platON platform, a major R&D expansion announced in October 2017, and is based on decoy oligonucleotides. The platON platform belongs to the so-called DNA damage response (DDR) technology, a domain to which recently marketed PARP inhibitors also belong. Onxeo's Beleodaq is already launched in the US with partner Spectrum for r/r peripheral T-cell lymphoma (r/r PTCL), generating royalties for Onxeo.

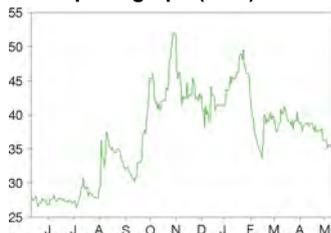

INDUSTRY OUTLOOK

The patent expiry of blockbuster drugs and increased competition from generics has shifted the focus of the pharmaceutical industry to orphan drugs. Government support, as well as input from the regulatory bodies provide incentives for orphan drug developers.

Analyst

Andy Smith

Orexo (ORX)

INVESTMENT SUMMARY

Orexo generated positive EBITDA and operating cash flow generation in FY16 and FY17, and have guided for this to continue in FY18. US commercial and public formulary coverage is dynamic but exclusive contracts with Humana, among other insurers, are having a positive impact on US Zubsolv volumes and sales. IP infringement litigation remains as an overhang. An Actavis generic launch before September 2019 is precluded; multiple cases are ongoing or, in the case of the '330 patent, under final appeal expected Q318. The EMA has approved Zubsolv for Europe, and partner Mundipharma should launch in Q218.

INDUSTRY OUTLOOK

Opioid dependence diagnosis/treatment rates are low due to social stigma, limited access to therapy in parts of the US and affordability. Competition includes Suboxone film (Indivior), Bunavail (BDSI) and six generic bup/nal tablets.

Dr Jonas Peciuslis

Oryzon Genomics (ORY)

INVESTMENT SUMMARY

Oryzon's expertise lies in developing small molecule inhibitors for epigenetic targets. The lead oncology product ORY-1001 is a first-in-class inhibitor of lysine specific demethylase 1 (LSD1) with positive data from the Phase I/IIa in acute leukaemia announced in December 2016. Oryzon's former partner Roche handed over the rights and the data from a Phase I trial with ORY-1001 in small cell lung cancer in January 2018. Oryzon is continuing the development of ORY-1001 in both indications. Oryzon's lead CNS product, ORY-2001, targets Alzheimer's disease (Phase IIa initiated), multiple sclerosis (Phase IIa initiated) and other neurodegenerative indications. ORY-3001 is a newer asset in preclinical development targeting certain orphan indications. The cash position was €38.1m at end Q118.

INDUSTRY OUTLOOK

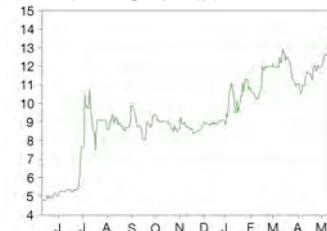

Epigenetics is a relatively young field in terms of drug development. HDACs were among the first epigenetic therapeutics brought to market, and although effective, they have side effects. Oryzon is among the leading clinical stage drug developers with a second generation of epigenetic therapeutics, which have greater selectivity and are expected to show a favourable safety/efficacy profile.

Analyst

Dr Susie Jana

Oxford BioMedica (OXB)

INVESTMENT SUMMARY

In 2018, OXB aims to maintain its position as a global leader in lentiviral development and manufacturing. On the back of a £20.5m gross raise, OXB is expanding its manufacturing capabilities to match increasing demand. The additional capacity is expected to come online in late 2019 and will enable OXB to continue the rapid growth of its platform (partnership) revenues. In the near term, revenue will continue to be driven by the Novartis partnership as Kymriah's commercial roll out continues (royalties and manufacturing fees). The possible spin-out/out-licensing of its priority development pipeline assets is ongoing (OXB-102, OXB-201, OXB-202, and OXB-302). OXB-102 in Parkinson's disease will be taken into a Phase I/II trial by OXB by mid-year. The company recently announced a partnership with Bioverativ (in field of hemophilia) potentially worth in excess of \$100m. As of 31st December, OXB have gross £14.3m in cash.

INDUSTRY OUTLOOK

Cell- and gene-therapy is the focus of much industry attention as it can dramatically alter the outcomes of many diseases. The proprietary lentivector platform has demonstrated promise in many indications.

Pacific Edge (PEB)

INVESTMENT SUMMARY

Pacific Edge develops and sells a portfolio of molecular diagnostic tests based on biomarkers for the early detection and management of cancer. Tests utilising its Cxbladder technology for detecting and monitoring bladder cancer are sold in the US, New Zealand and Australia. The company announced the signing of a Federal Supply Schedule to the Veterans Administration, allowing the marketing of Cxbladder tests within the organization - the largest integrated healthcare system in the US. The company has also signed an agreement recently with Tricare, which handles the healthcare for all uniformed service members and their families. The company also announced positive data from a user programme with Kaiser Permanente Southern California, which could lead to a commercial agreement with that group.

INDUSTRY OUTLOOK

Molecular diagnostics is a growing, but increasingly competitive field. Lead time from the initiation of user programmes to payment can be long.

Dr Dennis Hulme

Paion (PA8)

INVESTMENT SUMMARY

Paion reported positive results from Phase III trials of remimazolam for procedural sedation in bronchoscopy and colonoscopy. It has successfully completed Phase I studies to assess abuse potential, the final step of its US clinical development program. In the bronchoscopy trial 82.5% of patients on remimazolam achieved the primary outcome vs 3.4% on placebo and 34.8% on midazolam. While replacing midazolam as the primary target, planned US reimbursement changes favouring less supervision of sedation by anaesthetists could further incentivise uptake of remimazolam. In December Paion outlicensed Japanese rights to Mundipharma, which will bear the cost of market authorisation (filing for general anaesthesia expected in H218). Paion plans to initiate a Phase III study in GA in Europe in H218, with top-line data expected in 2019. Cash of €22.1m at 31 March plus anticipated milestone revenue is sufficient to file for procedural sedation in the US (filing by partner Cosmo expected Q418/Q119) and report top-line data from the European Phase III.

INDUSTRY OUTLOOK

Remimazolam has important advantages over competing products, including fast onset and offset of action with lower risk of cardiopulmonary events than the standard of care midazolam and propofol, and a reversal agent exists if there is over sedation.

PDL BioPharma (PDLI)

INVESTMENT SUMMARY

PDL BioPharma is reinventing itself as a healthcare-focused finance company through a three-pronged strategy: investing in royalty streams, providing high-yield financing to life science companies with near-term product launches as well as through the purchase of approved drugs to be sold by Noden Pharma (which is currently a wholly owned subsidiary) on a high margin basis. This strategy allows investors to gain exposure in healthcare through a relatively low-risk, diversified vehicle.

INDUSTRY OUTLOOK

PDL BioPharma is one of the only companies that will give broad exposure to diverse royalty streams as well as corporate debt and high margin approved products.

PharmaMar (PHM)

INVESTMENT SUMMARY

PharmaMar has built a pipeline of first-in-class cancer drugs for development with strategic partners. The company presented promising Zepsyre data in small cell lung cancer (SCLC) patients at the European Society for Medical Oncology (ESMO). Importantly, in Cohort B, which has the same dose as that being used in the Phase III trial, PFS was 5.3 months, which is higher than the 3-4 months typically seen with Topotecan, the current standard of care. The 600-patient Phase III ATLANTIS study in relapsed SCLC patients is ongoing with 465 patients enrolled. Enrollment is expected to complete in Q318 with data from the ATLANTIS trial expected in H119. Beyond SCLC, PharmaMar is also about to embark on a Phase III trial in endometrial cancer.

INDUSTRY OUTLOOK

PharmaMar's oncology portfolio has been validated through multiple global partnerships, eg J&J in the US and Taiho in Japan (for Yondelis).

Photocure (PHO)

INVESTMENT SUMMARY

Photocure is a commercial-stage Norwegian specialty pharmaceutical company that currently markets Hexvix/Cysview for diagnosing and managing bladder cancer. Recently, the US Centers for Medicare & Medicaid Services (CMS) issued a final rule that would improve reimbursement for a large number of procedures. Also, following positive Phase III results in the surveillance setting, the company received FDA approval for that indication in February (launch expected mid-year). Sales may have significant upside if the product successfully expands into the US bladder cancer surveillance market, which has 1.4m procedures per year, compared to its current market of 300,000 transurethral resection of the bladder (TURB) procedures.

INDUSTRY OUTLOOK

Photocure is a photodynamic therapy company focused on bladder cancer imaging, HPV-related diseases and acne. As its products typically are a combination of a drug and a device, hurdles for generics are typically higher than with other therapeutics.

Analyst

Pooya Hemami

Pixium Vision (PIX)

INVESTMENT SUMMARY

Pixium Vision is developing the Prima wireless photovoltaic sub-retinal implant, which transforms images into electrical signals to elicit a form of central visual perception in patients with severe retinal disease. It recently announced the first three human Prima implantations, followed by successful activations (resulting in reported light perception). These events occurred as per the protocol of the five-patient European Prima feasibility study, designed to assess the device in patients with advanced atrophic Dry Age-related macular degeneration (ARMD). The firm also plans to start a US Prima feasibility study in Q218. Pixium held €9.8m in gross cash at 31 March 2018 and in May 2018 raised €10.6m through the issuance of 5.68m new shares.

INDUSTRY OUTLOOK

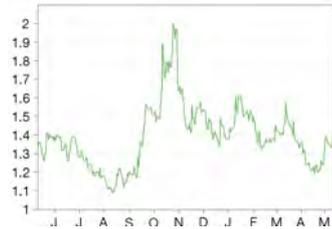

Second Sight (EYES) is commercialising an epiretinal implant (Argus II) in the US and EU approved for Retinitis Pigmentosa. Prima has been designed and being evaluated in clinical studies as a potential treatment option for Dry-ARMD, a common disease in aging population and a significant unmet medical need.

Maxim Jacobs

Pluristem Therapeutics (PSTI)

INVESTMENT SUMMARY

Pluristem Therapeutics is developing allogenic cell therapies derived from donated placental tissue. The company is advancing PLX-PAD in its Phase III study of critical limb ischemia (CLI) and Phase II study of intermittent claudication (IC), with the latter expecting results in Q218. Additionally the company received an orphan designation for PLX-R18 for acute radiation syndrome (ARS) currently in non-human primate studies and expanded its Phase I study for support of stem cell transplant to additional sites.

INDUSTRY OUTLOOK

Pluristem has been investigating the potential therapeutic benefit of cells derived from the placenta which offers a rich supply of cells of multiple lineages from tissue that would otherwise be medical waste. Although these cells are not stem cells and lack the immortality and pluripotency to meet that definition, they secrete a wide array of cytokines and growth factors and can exert a potent influence on the function of other cells in the body.

Analyst

Dr Jonas Peciulis

Probiobdrug (PBD)

INVESTMENT SUMMARY

Probiobdrug is developing a clinical pipeline focusing on the novel target of pGlu-Abeta, a toxic variant of amyloid-beta (Abeta) that has been implicated in the initiation and sustainment of the pathological cascade that leads to Alzheimer's disease (AD). Lead candidate PQ912 is an inhibitor of the enzyme glutaminyl cyclase, which is essential for the formation of pGlu-Abeta. Initial results from the Phase IIa study, SAPHIR, were reported on 12 June 2017. While primarily safety/tolerability study, several secondary endpoints especially piqued our interest, with CSF biomarker, EEG and a couple of cognitive tests pointing to a positive overall picture of the dataset. Probiobdrug has presented detailed Phase IIb development with the next trial planned to start by end-2018. Preclinical data also showed that PQ912 could be effective in Huntington's disease in an animal model. Subject to further preclinical work, PQ912 could be fast-tracked to the clinic in this indication.

INDUSTRY OUTLOOK

There are 44m dementia sufferers worldwide, 60% of whom have AD. The lack of disease-modifying therapies leaves a vast unmet clinical need. This, combined with increasing understanding of the disease process and the development of biomarkers, has led to increased optimism that a disease-modifying therapy may be found.

Maxim Jacobs

Quantum Genomics (ALQGC)

INVESTMENT SUMMARY

Quantum Genomics is investigating brain aminopeptidase A inhibitors, a new class of drug, for the treatment of hypertension and heart failure. They recently announced results from their 34-patient Phase IIa study of QGC001 for the treatment of mild/moderate arterial hypertension. It showed a 2.7 mmHg placebo-adjusted reduction in ambulatory systolic blood pressure (SBP) and a 4.7 mmHg reduction in in-office SBP. Patient dosing in the 250-patient NEW-HOPE study is expected to complete by the end of 2018 with data in Q119. The company is also launching a Phase IIb in heart failure in Q418 with results expected in H220.

INDUSTRY OUTLOOK

The angiotensin pathway is one of the primary methods of modulating blood pressure and is the target of many anti-hypertensive drugs, including ACE's and ARB's. However, there is a parallel pathway in the brain responsible for the secretion of vasopressin and heart rate that is unaddressed by current drugs and that is being targeted by Quantum Genomics.

Dr Jonas Pecuilis

RedHill Biopharma (RDHL)

INVESTMENT SUMMARY

RedHill has a broad R&D pipeline, but is focusing on GI and inflammatory diseases. The most advanced assets are TALICIA (RHB-105) for H. pylori infection (top-line results from confirmatory Phase III expected in Q418); RHB-104 for Crohn's disease (top-line results from first Phase III expected in mid-2018) and non-tuberculous mycobacteria infections (pivotal Phase III trial to start in H218); and BEKINDA for both gastroenteritis (positive results from first Phase III announced in June 2017) and diarrhoea-predominant IBS (positive final Phase II results announced in January 2018). RedHill has established a commercial business in the US and is promoting three GI products (Donnatal, EnteraGam and Esomeprazole Strontium DR Capsules 49.3mg) since 2017. Q118 sales were \$2.4m, up 22% q-o-q.

INDUSTRY OUTLOOK

RedHill's main focus on GI and inflammation include a range of conditions, which although can be treated with a variety of innovative and established products, there is still an unmet need in each of the diseases. In our view, carefully positioned, innovative solutions for the patients will attract attention.

Regeneus (RGS)

INVESTMENT SUMMARY

Regeneus is developing its mesenchymal stem cell technology for musculoskeletal conditions in humans (Progenza) and animals (CryoShot). It has entered a US\$16.5m collaboration with AGC Asahi Glass (AGC) for manufacture of Progenza cells for the Japanese market. Regeneus and AGC have formed a 50:50 JV which is seeking to sub-license partners for clinical development and commercialisation of Progenza in Japan in a number of indications, with the first Progenza clinical development licence targeted for Q218. Japanese legislation offers an accelerated path to market for regenerative medicines. Progenza therapy reduced osteoarthritis knee pain in Phase I. Regeneus holds global rights to autologous cancer vaccines for human (RGSH4K, in Phase I) and veterinary (Kvax) applications. Its Sygenus topical secretions technology improved the appearance of acne in adults in a clinical study, and produced better pain relief than morphine in preclinical studies.

INDUSTRY OUTLOOK

Regeneus focuses on early-stage product development, then partners. In addition to the AGC deal for Progenza in Japan, it has partnered with a global animal health company for CryoShot Canine. It will seek to identify wider applications of Progenza, beyond arthritis.

Analyst

Andy Smith

ReNeuron Group (RENE)

INVESTMENT SUMMARY

ReNeuron is focused on two cell therapy-based programmes. This includes the CTX neural stem cell programme which recently announced that positive response rates in key measures were sustained after 12 months of treatment. ReNeuron will be moving forward with a Phase IIb in the US in FY18 with data expected around H219. ReNeuron also has the hRPC (human retinal progenitor cells) programme for retinitis pigmentosa (currently in Phase I/II). It will also be commencing a Phase II trial in cone-rod dystrophy.

INDUSTRY OUTLOOK

Limited drug development has targeted chronic stroke to date, which is the area in which ReNeuron is attempting to demonstrate a meaningful reduction in disability. If shown, it would offer a compelling case for further development and/or partnering.

ROVI Laboratorios Farmaceuticos (ROVI)

INVESTMENT SUMMARY

ROVI, a profitable, speciality healthcare company, markets ~30 proprietary and in-licensed products across nine core franchises mainly in its domestic Spanish market. ROVI is at a major inflection point; it has launched its internally developed biosimilar enoxaparin into multiple European countries ahead of any competition; this is a key driver of sales and operating growth in the medium term. R&D progress continues with its proprietary ISM technology, notably with Risperidone ISM or DORIA, a long-acting injectable for schizophrenia, which is expected to read out data in Q219 from its Phase III PRISMA trial.

INDUSTRY OUTLOOK

ROVI has a strong presence in the Spanish heparin market (and select international markets through partners), where it has been manufacturing and marketing its flagship product Hibor (second-generation LMWH) since 1998.

Selvita (SLV)

INVESTMENT SUMMARY

Selvita is an R&D and drug discovery services company. In 2017 sales jumped by 59% y-o-y reflecting strong organic growth and an upfront payment from Berlin Chemie/Menarini. Selvita out-licensed its lead drug SEL24's to Menarini in March 2017 with a total potential value of the deal of €89.1m. SEL24 is a dual PIM/FLT3 inhibitor in Phase I/II for AML and the first such compound to progress to Phase I/II, to our knowledge. Second lead product is SEL120, a CDK8 inhibitor, partnered with the Leukemia & Lymphoma Society for AML and is undergoing IND-enabling studies. Multiple collaborations signed with partners such as Merck KGaA, H3 Biomedicine (Eisai) and JV (Nodthera) with Epidarex Capital validate Selvita's research capabilities. Recently, Selvita completed a share issue raising PLN134m, which will be a part of the total funds of PLN390m the company expects to invest until 2021 significantly ramping up its R&D activities.

INDUSTRY OUTLOOK

The profiles of SEL24 and SEL120 are potentially unique when compared to existing clinical-stage competitors and both candidates may offer efficacy advantages. Contract research is a fiercely competitive, but still rapidly growing market and we believe Selvita's geographical location and lower cost benefits make it well placed to compete.

Sierra Oncology (SRRA)

INVESTMENT SUMMARY

Sierra Oncology is a drug developer targeting the DNA damage response (DDR) network to treat cancer. The company has two Phase I/II trials with SRA737 targeting checkpoint kinase 1 (Chk1) in patients with genetic tumor types expected to respond to the drug. Inhibition of Chk1 is lethal in cells with defective p53 (among others), one of the most common cancer mutations, and may also be potentiated by low-dose chemotherapy. SRA737 is in Phase I/II clinical trials, both as a monotherapy and in combination with low dose gemcitabine. There is a planned Phase Ib/II trial of SRA737 in combination with the PARPi niraparib in Q418. Sierra is also in preclinical development with SRA141, a Cdc7 inhibitor with a different DNA damage response mechanism.

INDUSTRY OUTLOOK

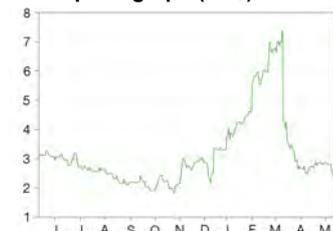

Chk1 has been a target of interest across the industry with ongoing studies at Eli Lilly and Roche and previous programs by AstraZeneca, Merck, and Pfizer among others.

Sunesis Pharmaceuticals (SNSS)

INVESTMENT SUMMARY

Sunesis is a pharmaceutical company developing small molecule oncology drugs. Its lead programme is SNS-062, a novel non-covalent, oral BTK inhibitor that may work in Imbruvica relapsed and refractory patients. Data from a Phase Ia study in healthy volunteers was recently presented and indicated an attractive PK/PD profile with twice-a-day dosing. The programme is entering a dose escalation Phase Ib/II trial. It has also developed TAK-580 with partner Takeda, and the preclinical PDK1 inhibitor SNS-510.

INDUSTRY OUTLOOK

Sunesis is an oncology company with an early stage asset with a validated target targeting patients that are in B-cell malignancies.

Dr Dennis Hulme

Symbio Pharmaceuticals (4582)

INVESTMENT SUMMARY

SymBio is on the way to becoming a key speciality pharma partner for Asia-Pacific markets, and has in-licensed two orphan blood cancer products. Treakisym was approved for r/r low grade NHL/MCL in 2010 and during 2016 received approvals in CLL and first-line low grade NHL/MCL; these additional approvals saw in-market Treakisym sales increase by 32% in Q1 2018, following 61% growth in 2017 (NHI price basis). In August SymBio initiated a Phase III trial in Japan of Treakisym in r/r diffuse large B-cell lymphoma, while in September it in-licensed liquid formulations that will provide Treakisym with patent protection that extends to 2031. Intravenous Rigosertib is in development for r/r higher-risk myelodysplastic syndromes (HR-MDS) and is in a pivotal Phase III global study which has expanded from 225 to 360 patients following an interim analysis in early 2018; SymBio is enrolling patients in Japan and is aiming for potential filing in 2021. SymBio intends to participate in a planned global trial of high-dose oral rigosertib in untreated HR-MDS patients.

INDUSTRY OUTLOOK

SymBio is focused on in-licensing niche opportunities in hard-to-treat indications often overlooked by big pharma. An in-house screening process to select additional pipeline candidates for development and commercialisation will be key to driving operating leverage.

Dr Jonas Pecuilis

Targovax (TRVX)

INVESTMENT SUMMARY

Targovax is an immuno-oncology (IO) company specialising in two distinct, but complementary immune activator approaches. ONCOS-102 is a genetically engineered adenovirus being tested in advanced melanoma, mesothelioma, peritoneal malignancies and prostate cancer. One of the key catalysts this year is the Phase I melanoma trial with interim data due in H218. From the TG platform, two mutant RAS-specific, neo-antigen cancer vaccines are in development for colorectal and pancreatic cancers, for which interim Phase I/II results with positive survival data were presented at ASCO in June 2017. Full data in the 32-patient Phase I/II trial in resected pancreatic cancer are due in H118. Targovax's core proposition is to use its products as immune response primers and combine with other anticancer therapies, such as checkpoint inhibitors, for increased efficacy.

INDUSTRY OUTLOOK

Checkpoint inhibitors (CPIs) gained popularity over the past several years, however, a large proportion of patients do not respond to CPIs. Both Targovax's platform technologies are designed to prime immune response to cancers, which offers synergies for use in combination with other immuno-oncology therapies.

Maxim Jacobs

Therapix Biosciences (TRPX)

INVESTMENT SUMMARY

Therapix is investigating the potential of new formulations of cannabinoids to address under-served diseases of the brain. It recently completed a Phase IIa for Tourette's syndrome, is entering Phase I for mild cognitive impairment, has initiated Phase IIa for obstructive sleep apnoea (OSA), and is beginning a Phase IIa for low back pain.

INDUSTRY OUTLOOK

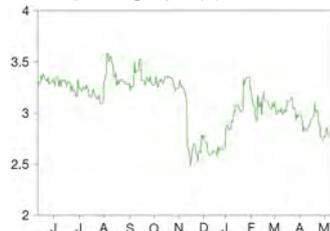

Diseases of the brain are a major unmet medical need with few effective or approved therapies for a host of diseases. Cannabinoids have had promising data in many indications in the area and is a class that has received a lot of interest.

Transgene (TNG)

INVESTMENT SUMMARY

Transgene is focused on the development of its cancer immunotherapy products (oncolytic virus Pexa-Vec, MUC1 cancer vaccine TG4010 and TG4001 for HPV) in combination with immune checkpoint inhibitors (ICIs) and infectious disease programmes (TG1050 for HBV). The company is running 11 clinical trials, including a Phase 2 TG4010 combination trial with Opdivo and chemotherapy in 1L NSCLC, a Phase 2 trial testing TG4010+Opdivo in 2L NSCLC, a Phase 2 with Pexa-Vec+Opdivo in 1L advanced liver cancer, a Phase 1b/2 trial of TG4001 in HPV positive cancers in combination with avelumab, a Phase 1 trial with Pexa-Vec+Yervoy in solid tumours and a Phase 1/2 of Pexa-Vec+metronomic cyclophosphamide in HER2 negative breast cancer. Transgene and partner Sillajen are running a global 600-patient Phase 3 study in liver cancer. Gross cash at 31 March 2017 was €35.6m.

INDUSTRY OUTLOOK

Immunotherapies are among the most promising class of products for cancer. Increased attention is now being paid to the use of combination therapy approaches to improve cancer response rates further.

Analyst

Dr John Savin

TxCell (TXCL)

INVESTMENT SUMMARY

TxCell has a viable manufacturing route for its novel CAR Treg product giving low inter-patient variability with potentially consistent therapeutic results; more details are due for disclosure in late February. Regulatory filings for a dose-ranging clinical trial in transplant are expected by late 2018. On the financial side, given the expiry of the warrants, TxCell has drawn €1.8m of convertible loans to support CAR Treg development. Cash on 31 March 2018 was €3.6m after tax credits and two tranches of convertible shares. Shares in issue are 21.8m and all the €5m loans from 2016 have been converted.

INDUSTRY OUTLOOK

TxCell is focused on CAR Treg development using humanised chimeric antigen receptor (CAR) technology similar to that in CAR T-cell cancer therapy. A granted European patent offers broad protection; Novartis has a small Treg study which shows big pharma interest. Other projects are at an earlier-stage of research and these could target broader markets.

Dr Dennis Hulme

Viralytics (VLA)

INVESTMENT SUMMARY

Viralytics agreed in February to be acquired by Merck & Co. for A\$502m (US\$395m) equivalent to A\$1.75 per share. The acquisition price represents a 160% premium to the one-month VWAP. A shareholder meeting to approve the acquisition by way of a scheme of arrangement will be held on 28 May. Viralytics had reported promising data from a number of clinical trials for its Cavatak oncolytic virus immunotherapy. Of note, the CAPRA trial of intra-lesional (IL) Cavatak in combination with Merck's Keytruda in melanoma reported a 59% response rate in the first 27 of 50 patients, while in the Keynote 200 trial of IV Cavatak + Keytruda, responses were observed in 5/16 advanced lung cancer and 7/25 bladder cancer patients. In the MITCI study of IL Cavatak + the CTLA4 inhibitor Yervoy the response rate to date is 33% (3/9) in patients who had failed single line anti-PD1 therapies; we note that Merck has a CTLA4 inhibitor MK-1308 in clinical trials, which could potentially be combined with Cavatak in place of Yervoy.

INDUSTRY OUTLOOK

The December 2016 licence deal between Bristol-Myers Squibb and PsiOxus for its preclinical oncolytic virus NG-348 highlights the potential value of oncolytic virotherapy products; terms included US\$50m upfront and up to US\$886m in milestones.

Dr Jonas Peciulis

VolitionRx (VNRX)

INVESTMENT SUMMARY

VolitionRx's proprietary Nu.Q™ technology detects the level and structure of nucleosomes in the blood using one drop of blood serum. It is currently focused on colorectal cancer (CRC), a very large opportunity with around 225 million people eligible for screening (US/EU). VolitionRx will be participating in a 13,500 undiagnosed person trial in the US to gain FDA approval. For Europe, the company is expecting readouts from 4300 and 12,000+ sample studies in H218 and Q119 respectively to support a CE Mark.

INDUSTRY OUTLOOK

The blood-based cancer screening market is in its nascent stages with great potential and serves an unmet medical need. Currently there are few, if any, non-invasive screening methods for the vast majority of cancers.

Edison NZ is registered on the New Zealand Financial Service Providers Register (FSP number 247505) and is registered to provide wholesale and/or generic financial adviser services only. Edison Investment Research Inc (Edison US) is the US subsidiary of Edison and is regulated by the Securities and Exchange Commission. Edison Investment Research Pty Limited (Edison Aus) [46085869] is the Australian subsidiary of Edison. Edison Germany is a branch entity of Edison Investment Research Limited [4794244]. www.edisongroup.com

DISCLAIMER

Copyright 2017 Edison Investment Research Limited. All rights reserved. This report has been prepared and issued by Edison for publication globally. All information used in the publication of this report has been compiled from publicly available sources that are believed to be reliable, however we do not guarantee the accuracy or completeness of this report. Opinions contained in this report represent those of the research department of Edison at the time of publication. The securities described in the Investment Research may not be eligible for sale in all jurisdictions or to certain categories of investors. This research is issued in Australia by Edison Investments Pty Ltd (Corporate Authorised Representative (1252501) of Myonlineadvisers Pty Ltd (AFSL: 427484)) and any access to it, is intended only for "wholesale clients" within the meaning of the Corporations Act 2001 of Australia. The Investment Research is distributed in the United States by Edison US to major US institutional investors only. Edison US is registered as an investment adviser with the Securities and Exchange Commission. Edison US relies upon the "publishers' exclusion" from the definition of investment adviser under Section 202(a)(11) of the Investment Advisers Act of 1940 and corresponding state securities laws. As such, Edison does not offer or provide personalised advice. We publish information about companies in which we believe our readers may be interested and this information reflects our sincere opinions. The information that we provide or that is derived from our website is not intended to be, and should not be construed in any manner whatsoever as, personalised advice. Also, our website and the information provided by us should not be construed by any subscriber or prospective subscriber as Edison's solicitation to effect, or attempt to effect, any transaction in a security. The research in this document is intended for New Zealand resident professional financial advisers or brokers (for use in their roles as financial advisers or brokers) and habitual investors who are "wholesale clients" for the purpose of the Financial Advisers Act 2008 (FAA) (as described in sections 5(c) (1)(a), (b) and (c) of the FAA). This is not a solicitation or inducement to buy, sell, subscribe, or underwrite any securities mentioned or in the topic of this document. This document is provided for information purposes only and should not be construed as an offer or solicitation for investment in any securities mentioned or in the topic of this document. A marketing communication under FCA rules, this document has not been prepared in accordance with the legal requirements designed to promote the independence of investment research and is not subject to any prohibition on dealing ahead of the dissemination of investment research. Edison has a restrictive policy relating to personal dealing. Edison Group does not conduct any investment business and, accordingly, does not itself hold any positions in the securities mentioned in this report. However, the respective directors, officers, employees and contractors of Edison may have a position in any or related securities mentioned in this report. Edison or its affiliates may perform services or solicit business from any of the companies mentioned in this report. The value of securities mentioned in this report can fall as well as rise and are subject to large and sudden swings. In addition it may be difficult or not possible to buy, sell or obtain accurate information about the value of securities mentioned in this report. Past performance is not necessarily a guide to future performance. Forward-looking information or statements in this report contain information that is based on assumptions, forecasts of future results, estimates of amounts not yet determinable, and therefore involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of their subject matter to be materially different from current expectations. For the purpose of the FAA, the content of this report is of a general nature, is intended as a source of general information only and is not intended to constitute a recommendation or opinion in relation to acquiring or disposing (including refraining from acquiring or disposing) of securities. The distribution of this document is not a 'personalised service' and, to the extent that it contains any financial advice, is intended only as a "class service" provided by Edison within the meaning of the FAA (ie without taking into account the particular financial situation or goals of any person). As such, it should not be relied upon in making an investment decision. To the maximum extent permitted by law, Edison, its affiliates and contractors, and their respective directors, officers and employees will not be liable for any loss or damage arising as a result of reliance being placed on any of the information contained in this report and do not guarantee the returns on investments in the products discussed in this publication. FTSE International Limited ("FTSE") © FTSE 2017. "FTSE" is a trade mark of the London Stock Exchange Group companies and is used by FTSE International Limited under license. All rights in the FTSE indices and/or FTSE ratings vest in FTSE and/or its licensors. Neither FTSE nor its licensors accept any liability for any errors or omissions in the FTSE indices and/or FTSE ratings or underlying data.
